

CERAMIC DENIBBING BLADE

RUPES CERAMIC DENIBBING BLADE

The new RUPES Ceramic Denibbing Blade is specially designed for efficient and safer denibbing, removing paint drips, runs, sags, and bonded dirt from smooth surfaces. Made of ceramic material, this tool ensures long term durability and consistent results. This highly processed block is precisely shaped to quickly and safely remove above surface paint defects.

By using the chamfered edge, and slightly tilted application, more severe defects can be safely removed. Pass it over the defect to be corrected from the flat side and apply little pressure to remove above surface defects easily with reduced risk compared to other methods. Ideal for quickly removing nibs and imperfections with minimal damage to the surrounding paint.
